PREFACE

This Assembly Manual contains the information needed to assemble the Yamaha water vehicle correctly prior to delivery to the customer. Since some external parts of the water vehicle have not been assembled at the Yamaha factory for convenience of packing, assembly by the Yamaha dealer is required. It should be noted that the reassembled water vehicle should be thoroughly cleaned, inspected, and adjusted prior to delivery to the customer.

NOTICE

Because Yamaha constantly strives for product improvement, the service specifications may be subject to change in the future. If any change is introduced into the specifications or assembly procedures, Yamaha dealers will be notified by a technical bulletin.

IMPORTANT MANUAL INFORMATION:

Particularly important information is distinguished in this manual by the following notations.

 The safety Alert Symbol means **ATTENTION! BECOME ALERT! YOUR SAFETY IS INVOLVED!**

⚠ WARNING
Failure to follow WARNING instructions could result in severe injury or death to the machine operator, a bystander, or a person inspecting or repairing the water vehicle.

CAUTION:
A CAUTION indicates special precautions that must be taken to avoid damage to the water vehicle.

NOTE:
A NOTE provides key information to make procedures easier or cleaner.

SYMBOLS USED IN THIS ASSEMBLY MANUAL

In order to simplify descriptions in assembly manuals, the following symbols are used:

 : Coat with water resistant grease. (Yamaha grease A, Yamaha marine grease)

 : Tightening torque.

 : Provide clearance.

 : Install so that the arrow mark faces upward.

 : Frontward of the water vehicle.

 : Made of rubber or plastics.

 : Tighten temporarily.

 : Apply locking agent. LOCTITE®, No.242 (BLUE LOCTITE)

Size:

d/D : Diameter of part.

ℓ : Length of part.

Nut (A)	Bolt (B)	General torque specifications		
		Nm	kgf•m	lb•ft
8 mm	M5	5.0	0.5	3.6
10 mm	M6	8.0	0.8	5.8
12 mm	M8	18	1.8	13
14 mm	M10	36	3.6	25
17 mm	M12	43	4.3	31

GENERAL TORQUE SPECIFICATIONS

This chart specifies the torques for tightening standard fasteners with standard clean dry ISO threads at room temperature. Torque specifications for special components or assemblies are given in applicable sections of this manual. To avoid causing warpage, tighten multi-fastener assemblies in a criss-cross fashion, in progressive stages until the specified torque is reached.

UNPACKING AND CHECKING

Carefully uncrate unit and inventory any missing or damaged parts.

NOTE: _____

For USA:

If concealed damage is found during uncrating, refer to the Yamaha Warranty Handbook, Chapter 3. Documentation may be required for warranty reimbursement. Do not continue with uncrating or throw the crate away until the requirements in Chapter 3 have been met.

BATTERY

⚠ WARNING

- Battery electrolyte is poisonous and dangerous, causing severe burns, etc. Contains sulfuric acid.
- Avoid contact with skin, eyes or clothing.
- Antidote: EXTERNAL-Flush with water.
- INTERNAL-Drink large quantities of water or milk. Follow with milk of magnesia, beaten egg or vegetable oil. Call a physician immediately. Eyes: Flush with water for 15 minutes and get prompt medical attention. Batteries produce explosive gases. Keep sparks, flame, cigarettes, etc., away. Ventilate when charging or using in an enclosed space. Always shield your eyes when working near batteries.
- KEEP OUT OF REACH OF CHILDREN.

CAUTION:

Be careful not to place the battery on its side. Before adding the battery fluid or recharging, be sure to bring it out of the battery compartment. When checking the battery, make sure the breather hose is connected to the battery and is not pinched shut anywhere in the battery compartment.

1. Fill:

- Battery electrolyte

Filling steps:

- Remove all the filler caps using pliers.
- Fill with the specified electrolyte from a jug.
- After the electrolyte is filled up as far as the UPPER LEVEL (a), allow the cell to stand for 20 minutes. If after 20 minutes, the electrolyte level has dropped, add more electrolyte up to the UPPER LEVEL mark once again.

2. Inspect:

- Battery fluid specific gravity
Out of specification → Charge.

Specific gravity at 20°C (68°F):

1.28

Charging current:

68.4 kC (1.9 Amps × 10 Hrs)

3. Install:

- Filler caps

CAUTION: _____

Rinse off any electrolyte from the battery case and wipe the battery dry prior to installation.

OIL PUMP AIR BLEEDING

1. Bleed:

- Air

Air bleeding steps:

- Place rags around the air bleed screw ① to catch any oil that might spill.
- Fill the oil tank with the recommended engine oil.

**Recommended engine oil:
YAMALUBE 2-W oil only**

- Loosen the air bleed screw ① two full turns and make sure that both the oil and air bubbles flow out.
- When there are no air bubbles left, tighten the air bleed screw.
- Wipe up any spilt oil.

**Air bleed screw:
3 Nm (0.3 kgf · m, 2.2 lb · ft)**

CAUTION:

- Do not run the engine if oil does not flow out the air bleed screw. Inspect the oil lines for proper routing and make sure there are no restrictions in the line.
- Fill the fuel tank with 50:1 premixed fuel using the recommended engine oil during the first full tank of operation.
- Use only YAMALUBE 2-W oil. Using another oil can seriously damage the catalytic converter and other engine components.

TROLLING SPEED

1. Measure:

- Trolling speed

Out of specification → Adjust.

	Trolling speed: 1,350 ± 50 r/min
-----------------------------------------------------------------------------------	---------------------------------------------------

Checking steps: (Vehicle on water)

- Start the engine and allow it to warm up for a few minutes.
- Attach an engine tachometer to the spark plug lead.

	Engine tachometer: YU-8036-A/90890-06760
-----------------------------------------------------------------------------------	-----------------------------------------------------------

- Measure the engine trolling speed.

2. Adjust:

- Trolling speed

Adjustment steps:

- Start the engine.
- Turn the remote throttle stop screw ① in or out until the specified speed is obtained.

Turn in	Increase trolling speed.
Turn out	Decrease trolling speed.

STEERING CABLE

1. Check:

- Distance ①, ②
- Out of specification → Adjust.

**Difference of distances ① and ②:
Maximum 5 mm (0.2 in)**

Checking steps:

- Turn the handlebar lock to lock.
- Measure the distances ① and ②.
- If the difference of distances ① and ② is not within specification, adjust the cable joint.

2. Adjust:

- Steering cable joint (handle side)

Adjustment steps:

- Loosen the locknut ①.
- Disconnect the cable joint ② from the ball joint ③.
- Turn the cable joint in or out for adjusting the distances ① and ②.

Turn in	Distance ① is increased.
Turn out	Distance ② is increased.

⚠ WARNING

The cable joint must be screwed in more than 8 mm (0.31 in).

- Connect the cable joint and tighten the locknut.

Locknut:
6 Nm (0.6 kgf · m, 4.3 lb · ft)

QSTS CABLE

1. Measure:

- Nozzle deflector set length ①, ②
- Difference → Adjust.

Measurement steps:

- Set the control grip in the neutral position.
- Set the jet nozzle in the center position.
- Measure the nozzle deflector set length ① and ②.
- If ① and ② length are not even, adjust the cable joint.

2. Adjust:

- QSTS cable

Adjustment steps:

- Set the control grip in the neutral position.
- Loosen the locknut ①.
- Remove the nut ② and pivot pin ③.
- Set the jet nozzle in the center position.
- Turn the cable joint ④ in or out for adjusting length ① and ②.

Turn in	Length ② is increased.
---------	------------------------

Turn out	Length ① is increased.
----------	------------------------

⚠ WARNING

The cable joint must be screwed in more than 8 mm (0.31 in).

- Connect the cable joint ④ and pivot pin ③ and tighten the nut ②.

Nut:
4 Nm (0.4 kgf · m, 2.9 lb · ft)

- Tighten the locknut ①.

Locknut:
4 Nm (0.4 kgf · m, 2.9 lb · ft)

NOTE:

If correct adjustment by using the cable joint at the wheel end is not obtained, adjust the cable joint on the trim nozzle end.
